PROJECTS

Arcane Ascent — *Godot*

- Developed an action roguelike featuring procedurally generated levels, real-time combat, and modular gameplay systems.
- Implemented procedural generation algorithms to dynamically create unique dungeon layouts and replayable environments.
- Designed reusable gameplay systems for player abilities, enemies, and progression mechanics.

Project: Slime Roller — *Unity, C#*

- Collaborated with a team to develop a physics-based marble rolling game featuring custom movement systems, shader effects, and AI-driven gameplay elements.
- Implemented physics interactions using Unity's Rigidbody system to create responsive rolling mechanics and object interactions.
- Created custom shaders and visual effects to enhance the game's environment and character presentation.
- Designed enemy AI behaviors using Unity NavMesh and finite state machines to create dynamic encounters and responsive gameplay.

Secrets of Totumal — *GDevelop*

- Designed and built a multi-level platformer with an emphasis on engaging puzzle-solving and progressively challenging gameplay.
- Crafted level layouts that balanced difficulty while introducing new gameplay mechanics.
- Iterated on level designs based on playtesting feedback to improve pacing, challenge, and overall player experience.

Personal Portfolio Website — *HTML, CSS, JavaScript*

- Designed and developed a responsive personal portfolio website to showcase technical projects and game development experience.
- Integrated links to GitHub, itch.io, and project demos to provide easy access to source code and playable games.
